1. INTRODUCTION TO HTML

What is HTML?
HTML is the language in which most websites are written. HTML is used to create pages and make them functional.

The History of HTML
HTML was first created by Tim Berners-Lee, Robert Cailliau, and others starting in 1989. It stands for Hyper Text Markup Language. Hypertext means that the document contains links that allow the reader to jump to other places in the document or to another document altogether. The latest version is known as HTML5.A Markup Language is a way that computers speak to each other to control how text is processed and presented. To do this HTML uses two things: tags and attributes.

What are Tags and Attributes?
Tags and attributes are the basis of HTML.

What Are HTML Tags?
Tags are used to mark up the start of an HTML element and they are usually enclosed in angle brackets. An example of a tag is: <h1>.

Most tags must be opened <h1> and closed </h1> in order to function.

What are HTML Attributes?
Attributes contain additional pieces of information. Attributes take the form of an opening tag and additional info is placed inside.

An example of an attribute is:

**<img src="layout.jpg" alt="HTML Layout.">**

In this instance, the image source (src) and the alt text (alt) are attributes of the <img> tag
